

## Retap - The Eco-friendly water solution

Retap is a Scandinavian company that aims to reshape the water consumption of private consumers and corporate employees alike by providing a clean, eco-friendly and cost efficient alternative to bottled water while bringing pleasure to drinking water.

### Eco-friendly and convenient

It requires 2000 times more energy to produce 0,5L bottled mineral water than 0,5L of tap water. In addition, more than 1.5M tonnes of plastic waste is created every year from bottled water - the same amount of oil required to fuel 1million cars. That's without even taking the transportation of the water into consideration.

Take a stand – use Retap,

### Active communication with employees and customers

Retap is designed so that you can actively use the bottle for internal and external communication. Print your logo - make a statement - change the color of the lid.

Freedom to make Retap your corporate bottle and have your employees brand your company in a sustainable way.

### No health risks

Reusing plastic bottles presents a potential health risk. When reusing a PET-bottle over and over you risk releasing harmful hormone disturbing substances into your drinking water. Tests have shown that reusing your PET-bottle 5 times gives a bacteria count 13 times higher than what is considered good drinking water.

Retap is washable in any dishwasher and is designed without threads and any other place where bacteria might grow.

### Reduce cost

If you want to find new ways of saving costs - expensive bottled water is a great place to start. Did you know that providing your employees with bottled water usually costs around €165 per employee a year.

So get rid of the cost and keep the convenience of bottled water by providing your employees with a Retap bottle. It will pay itself back within one month.

# Retap Values

## Eco-innovation

Retap continuously challenges the state-of-the-art solutions available on the market, thereby innovating new eco-friendly solutions that are superior in terms of eco-friendliness as well as cost without compromising user convenience.

## Eco-friendliness

Retap provides hassle free eco-awareness in companies and our surrounding society by providing convenience in Going Green, thereby facilitating a shift away from bottled water.

## Customer satisfaction

Retap prioritizes customer satisfaction, which is why we operate a completely transparent business model. This enables companies to easily obtain a lower environmental footprint by using our water solution.
