The idyllic thatched roof cottage is a dream for many, and the designers of this eco-friendly house were no different - so made one out of seaweed

The remote forest home has a roof made entirely from water-based plants, which also coat several walls.

A thatched roof is normally made out of straw, rushes or heather, but when inland vegetation was nowhere to be found, the Danish team behind the eco-home turned to a nearby lake.

The Modern Tanghus in Læsø, Denmark stands as a well as an example of modern building sustainability.

This tiny island sits in the **Danish desert belt** and ha once a darling of the salt industry until climate shifts **changed the landscape**.

The Modern Tanghus by Vandkunsten is a nod to the island's history... as modern sustainability. (Image: Helene Høyer Mikkelsen/Realdania Byg)
